DETAILED ACTION

This is a second Restriction Requirement. The first involved the straightforward separation of method and apparatus groupings of claims. The Applicant has elected without traverse the grouping of claims 1-38, which included a method (claims 1-38).

This second Restriction is imposed because from claims 1-38 two distinct methods exist, which were not noticed until substantive examination began.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-23, drawn to a method for treating a lung **with an RF energy device**, classified in class 606, subclass 41.
- II. Claims 24-38, drawn to a method for improving gaseous exchange in a lung, classified in class 128, subclass 898.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation one which involves RF ablation (group I), and another which involves channel creation (**with no mention of how**) for improving gaseous exchange in a lung (group II).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

A telephone call was made to Sanjay Bagade on 7-4-05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Note: currently all claims excluding claim 3 would receive a 35 USC § 112 2nd paragraph rejection for being indefinite. There is no significant positive recitation of *how* the channels are created, merely that they are created. The Examiner strongly urges the Applicant to elect group I, *supra*, and insert at least claim 3 into claim 1. Electing group II might result in transfer of the application to another Art Unit and further delay. (The application has currently been assigned within the Office due to claim 3's mention of RF energy.)

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

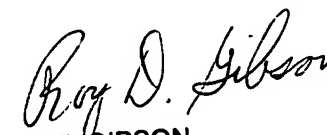

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
